Microsoft Office or Microsoft Office System is a collection of computer programs made by Microsoft. The programs are created for all users. There are different versions of the software for home users and for business users. Some versions may offer more programs, and some versions cost less than *others, but none* are for free. The current version is Microsoft Office 2016 (Windows) and Microsoft Office for Mac 2016 (Mac).

Products

The versions available are made up of some or all or more of the following programs:

- Microsoft Word is a word processor that lets a user type text into the document and add images, and different font or design choices. The main file formats are .doc and .docx. It also helps to check the spelling and find the meaning of words
- Microsoft Excel is a spreadsheet and mathematics program that can make calculations and graphs based on data the user enters. The main file formats are .xls and .xlsx.
- Microsoft PowerPoint is a program that creates presentations and slideshows. They can have text, drawing, pictures and media. They can also be set up to show on a projector.
- Microsoft Outlook is an email client that can send and receive emails. The user can add a contact list and multiple calendars.

- [Microsoft Access](#) is a database program where people can store data over many tables.
- On the Insert tab, the galleries include items that are designed to coordinate with the overall look of your document. You can use these galleries to insert tables, headers, footers, lists, cover pages, and other document building blocks. When you create pictures, charts, or diagrams, they also coordinate with your current document look.

You can easily change the formatting of selected text in the document text by choosing a look for the selected text from the Quick Styles gallery on the Home tab. You can also format text directly by using the other controls on the Home tab. Most controls offer a choice of using the look from the current theme or using a format that you specify directly.

To change the overall look of your document, choose new Theme elements on the Page Layout tab. To change the looks available in the Quick Style gallery, use the Change Current Quick Style Set command. Both the Themes gallery and the Quick Styles gallery provide reset commands so that you can always restore the look of your document to the original contained in your current template.
