

BASIC QUESTION (FCCB)

Operating system

Que.1 what is computer?

Ans. A computer is an electronic device, operating under the control of instructions stored in its own memory that can accept data (input), process the data according to specified rules, produce information (output), and store the information for future use.

Features of computer

- Speed
- Automation
- Accuracy
- Versatility
- High Storage Capacity
- Diligence
- Reliability
- Power of Remembrance

Que.2) Explain limitations of computer?

Ans.

- **No IQ:** A computer cannot act on situations that are not fed or programmed into them.
- **No feelings:** A computer proves unsuccessful in such scenarios as it does not have feelings/ EQ(Emotional Quotient). A computer can be used to search for any information from the web.
- **Lack of Decision Making:** *A computer cannot decide on its own. Each operation that the computer performs is fed with an algorithm to perform different processes for each situation.*
- **Lack of Common Sense:** A computer might be an automated machine still, it requires human assistance. It works only when it is provided with some input.
- **Cannot Implement:** A computer has huge storage and can store a hundred times more than a human brain. However, due to lack of implementation, it proves to be useless.

- **Human dependency:** A computer is a machine and is fully automated once switched on. But it cannot work to switch itself on. The computer also does not when to start and when to stop unless it is fed with such a program.

Que.3) Define terms: desktop, icons, taskbar?

Desktop- : The screen that appears after the computer starts. That is desktop. On this there are system icon, program icon and file, folder. With this we can easily access any item. The desktop is the primary user interface of the computer. When booting up the computer, desktop development takes place after the startup processing is completed.

•

Icon : Different symbols are made on the desktop of the computer. Such as My Computer, My Network, Recycle bin are the symbols that are made. They are called icons, there is a small icon on the computer, on which you click and go inside that app or software or file.

•

Taskbar:- A line is made on the bottom side of the desktop, which is called the taskbar, it is always visible and highlighted. The taskbar is by default, which can be set in top, left, right, it can also be locked at one place of the taskbar. Symbols are made on the left side start button and on the right side Date & Time, Wifi, Sound, etc. The work done by us appears in the task bar, whenever an application is minimized, it gets stored in the taskbar.

Que 4) What Is folder? Write steps to create a folder?

Ans.. A folder is made to keep the computer's files in one place, a folder is like a space where we can save and keep our files, in the same way many other files and sub-folders can be kept in a computer folder. Is

Steps

- 1) Go to the desktop window of our computer.
- 2) Right click on your mouse
- 3) Click on new option
- 4) Select folder
- 5) Then add folder name as per choice
- 6) Save it.

Que 5) What is control panel? What are the options in control menu?

- The control panel is a group of different programs that come pre-installed in Microsoft Windows devices, in which many computer settings come such as - hardware settings, system and security settings, network and internet settings, user account settings etc.

- Clock, Language, and Region.
- Ease of Access.
- Hardware and Sound.
- Network and Internet.
- Programs.
- System and Security.
- User Accounts

Que. 6) What is wallpaper? Steps to change wallpaper?.

ANS. Wallpaper, or desktop background, is a background image that covers the desktop screen of a computer, or the screen of another device. Operating systems provide their own default wallpaper

- 1) Right Click on your mouse.
- 2) Select personalization.
- 3) Go to wallpaper.
- 4) Select them on your choice
- 5) Than accept all changes
- 6) Ok (save it), apply.

Que. 7) SCREENSAVER

Screen saver There is a computer program that clears the screen or when the computer is not used for a long time and goes to sleep mode, then adding content or patterns to it, it is called screen saver.

Que 8) DEFINE TERMS**START BUTTON**

This is an important part of the window that we see on the left side of the Taskbar. Pressing the Start Button opens some menu list, which we call Start Menu, their texture may be different according to the window version and manufacturing.

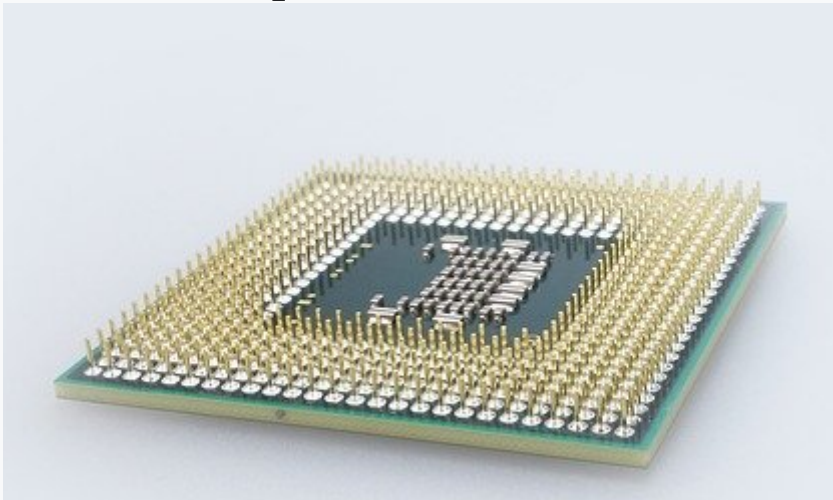

OFFICE BUTTON: This option is used while creating Ms Word new document, to open the created document, to print the document and to put password on the document.

My computer

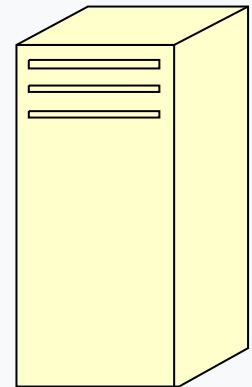

My computer is a system folder. With the help of this we can see all the drives. And can work with them too. In this we can see files or folder in different view.

Que 9. Define central processing Unit?

Ans. Central processing Unit: The full form of CPU is Central Processing Unit. It is an important part of computer. Which is similar to a chip. It processes all the instructions of the computer and provides/receives the according result of the program. After this the computer gives some output. That is, the work before receiving the output in the computer is done by the CPU. It controls and processes the instructions.

Central processing unit chip

central processing unit

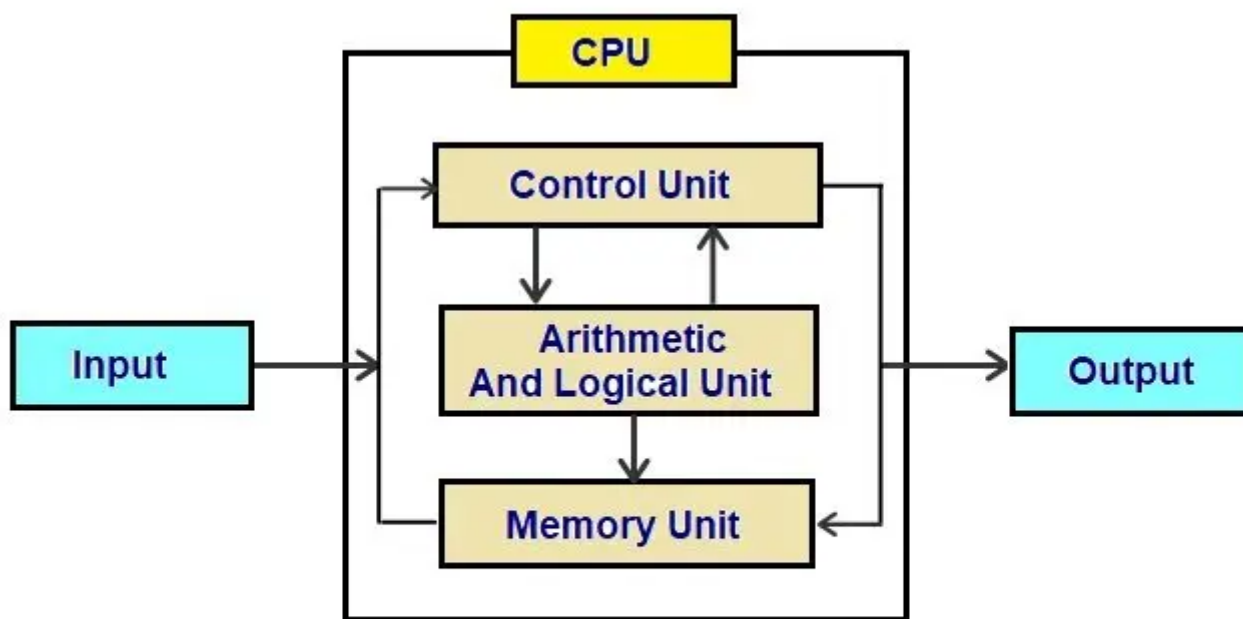

Que.10) Function of central processing Unit?

Ans. Many functions perform by central processing unit.

1. CPU reads data by accessing memory to provide input.
2. The CPU follows the instruction received from the computer keyboard.

3. CPU controls and processes all the functions of the computer.
4. CPU works on the basis of programs and instructions received from the computer.
5. The CPU receives the data from the input device and shows the result.
6. The CPU processes all the functions of the computer.
7. The CPU does the arithmetic calculation.
8. Converts CPU Input to Output.
9. The CPU connects the Input Device and Output Device together.

Que. 11) Components of central processing?

Block Diagram of a Computer

ArtOfTesting

Block Diagram of a Computer

Ans. Arithmetical Logical Unit (ALU)

Arithmetical Logical Unit is called ALU. It is the main part of CPU. It is responsible for doing arithmetic and logical calculations. like:- add, subtract, multiplication ect. Apart from this, according

to the logical function, selecting, matching etc. is also the work of this part of the CPU. The function of ALU is to perform Arithmetical Operations and Logical Operations.

2. Control Unit (CU)

The control unit is called CU. It controls all the work or events of the computer. Controls all the tasks happening in the computer. It receives instructions from computer memory. Apart from this, it creates balance between all the input devices, output devices and processors of the computer. Due to which the result of the instructions given by the input device is received on the output device.

3. Memory Unit:

A memory unit is a storage device. Which is used to collect important instruction, program, command and result in the computer. This is also an important part of the CPU. To do any work in the computer, the instructions received first keep in the memory. After which the instructions are received from the memory and processed. After processing, the results are then kept in the memory. So that the user can use it anytime. Computers use different memory to perform these tasks.

Que.12) What is input device?

Ans.

An input device is an electronic device through which we can enter data into a computer device. It is a part of computer. Any device through which we input anything into a computer or personal computer is called an input device.

For example:- Keyboard, Mouse, Scanner, microphone, Light Pen. From all these devices, we give input to the computer.

Keyboard:

This is the most main input device. With the help of this, we can do all the writing work of the computer. It is one of the most used devices. With the help of this we can type anything.

Mouse:

It is also known as pointing device and cursor moving device. A mouse can have 2 or 3 buttons. Such as Left, Right and Middle buttons (Left key, Right key, Middle key Roller). The use of this mouse has increased the importance of Graphical User Interface in the computer.

Joystick:-

Joystick is an input device. Works like a trackball. There are two balls in it. A stick is applied with the balls so that the ball can be rotated easily. It is used in CAD Design, playing video games.

Light Pen :-

It is a pointing device and pointing device. With its help, it can be written on the computer screen. Picture can be made, bar code can be read, Photocell and optical system are present inside the small tube of this pen. The Light Pen is moved above the screen and the Pen Button is pressed. So then the photocell detects the location of

the screen and sends the corresponding signal of that location to the CPU.

Que. 13) What is output devices?

Ans Output devices are those devices, which after processing the input data of the computer, the device in which its result or output shows, is called output device. There are different types of output devices in the computer.

Monitor:- Monitor is an electronic device and also called output device. The monitor which looks like (T.V.), shows us the result or output of the computer in the form of graphics on the monitor and it is also called as Visual Display Unit (VDU). The output we get in the form of graphics on the monitor is made with the help of pixels.

Speaker:- Speaker is an output device, with the help of which we can listen to the audio files stored in the computer with the help of speaker. Using the speaker, we listen to the sound in the output. When you open the audio files kept in the computer, there is a component of the computer, the sound card, with the help of which the computer generates sound from the speaker.

Projector: Projector is also an output device, with the help of which we can show the screen of the computer on a large area. The projector is used to show the presentation. Projectors are used in offices, schools, colleges and meetings.

Ques. 14) What is ALU? Describe its functions?

Ans. The full name of ALU is Arithmetic Logic Unit i.e. arithmetic and logic unit. The ALU is that important part or component of the CPU. where the actual number of instances during processing

It is functional. It is used to do arithmetic and logic unit calculations.

Functions of ALU

Arithmetic unit: Arithmetic operations include arithmetic functions like-

- Additions (+),
- Subtractions (-),
- Multiplications (x)
- Divisions ($\div$) etc.

Logical unit: Under this, there is a program related to logic. Such as comparing, comparing, selecting which data will work on which data, etc.

Que.15) what is operating system?

Ans Operating System (OS) is a software that acts as an interface between the computer and the users. This is called system software. Operating System is a group of instructions which is stored in the storage device. And it is a group of programs that manages the computer's resources and operations. This is the first

program to be loaded into the OS computer. It is also called program of programs. The function of the OS is to run other programs and applications and it acts like a bridge between the hardware and software of the computer. A computer is useless without an OS.

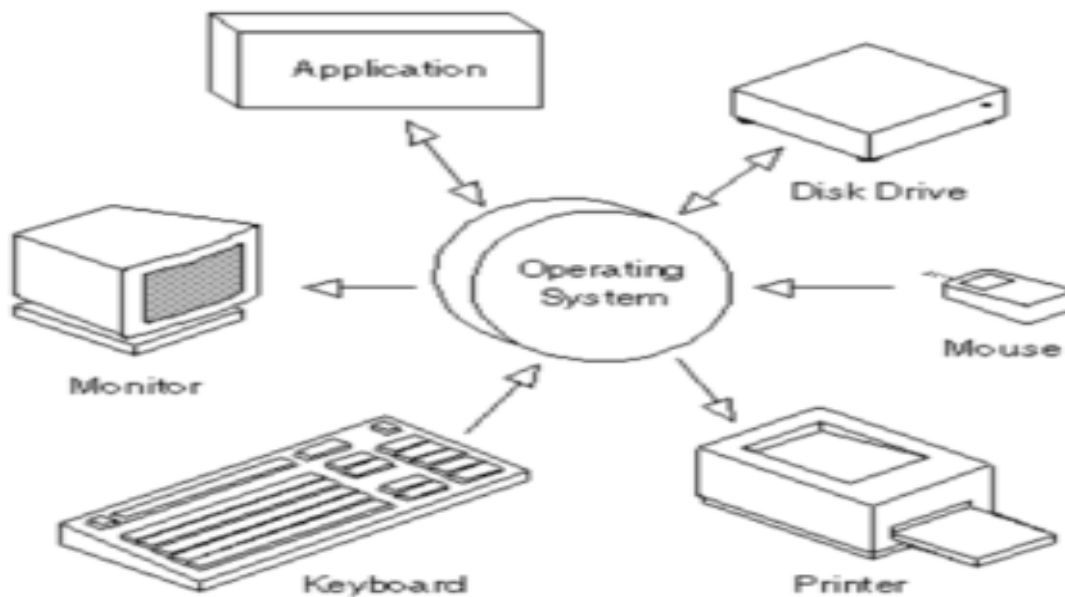

Diagram of operating system

Que.16) explain types of operating system?

Ans. operating system is two types.

1:- character user interface (CUI)

2:- Graphical user interface (GUI)

character user interface (CUI) – CUI is not user-friendly and commands always have to be typed to run this OS. Eg:- DOS is a (CUI) operating system.

Graphical user interface (GUI) – The GUI operating system is user-friendly and commands do not have to be given to run this operating system, but the program that has to be opened has to be

clicked with the mouse. For example:- Window is a GUI operating system.

Que.17) explain characteristics of operating system?

Ans. Characteristics of Operating System

Memory management:- The OS manages the memory, it keeps complete information about the primary memory and sees which part of the memory is used by which program. Whenever a program requests, it allocates memory.

Processor management:- It allocates processor (CPU) to the program and when the need of CPU for a program is over, it also deallocate it.

Device management:- The OS keeps the information of all the devices, it is also called I/O controller. And the OS also decides which device command should be given to which program and for how much time.

File management:- It allocates and deallocates the resources and decides which program to give or allocate resources to.

Security:- It protects any program or data from unauthorized exchange. In this password and other techniques are used.

Ease of use :- It can be used easily as it also has GUI interface

Advantage of operating system

- Operating system can be used easily because it has graphical user interface. And new users can easily run the computer through this.

- Through this we can share one data with many users.
- Through this we can share resources like: - printer
- They can be updated easily.
- It is secure like: - Windows has a windows defender which detects any type of harmful files and removes them.
- Through this we can install any game or software and run them.
- Some operating systems (eg:- LINUX) are open source, we can run them on our computer for free.

Disadvantage of operating systemi

- Some operating systems are free but some are expansive like:- The price of windows ranges from about 5000 ₹ to 10000 ₹.
- Linux is difficult to run in comparison to windows.
- Sometimes it does not sport any hardware,
- The risk of viruses is high in Mac OS.

Que. 18) what is memory?

Ans Computer memory is a physical device, which is used to store data, information and instructions in a computer temporarily and permanently. Memory is made up of many small cells which store binary information in the form of bits.

Que.19) Types of computer memory?

Ans. There are two types of memory,

- 1) primary memory
- 2) secondary memory

primary memory

Primary memory is the main memory of a computer that stores data and programs currently being used by the CPU (Central Processing Unit). It is fast and directly accessible by the CPU.

There are mainly three types of primary memory: **RAM, ROM, and Cache memory**. Its storage capacity is smaller compared to secondary memory, but it provides much faster access to data.

Primary memory includes both:

- **Volatile memory (RAM)** – stores data only when the computer is on.
- **Non-volatile memory (ROM)** – stores data permanently.

It is located close to the CPU on the motherboard, which allows the CPU to access data very quickly.

Secondary memory

Secondary memory is used to store data and programs permanently. It is not directly accessed by the CPU and has a much larger storage capacity than primary memory.

Examples of secondary memory include **Hard Disk Drive (HDD)** and **Solid State Drive (SSD)**.

It is slower than primary memory but is used for long-term storage of data.

That is why they are called non-volatile. Mainly in desktop computers, HDD and SSD are called "Secondary Memory".

Que.20) Difference between primary memory and secondary memory?

Ans.

BASIS FOR COMPARISON	PRIMARY MEMORY	SECONDARY MEMORY
Basic	Primary memory is directly accessible by the processor and CPU. Main memory. Auxiliary memory.	Secondary memory is not directly accessible by the CPU.
Altered Name	Main memory.	Auxiliary memory.
Volatility	Primary memory is usually volatile. Secondary memory is non	Secondary memory is non volatile.
Formation	Primary memory is made of semiconductors.	Secondary memory is made up of magnetic and optical

BASIS FOR COMPARISON	PRIMARY MEMORY	SECONDARY MEMORY
		materials.
Access	Primary memory is accessed by the database.	The secondary memory is accessed through input-output channels.
Size	The computer has a small primary memory.	storage of these secondary memory of the computer Capacity is more.
Expense	Primary memory is expensive in comparison to secondary memory	Secondary memory is cheaper than primary memory.
Memory	Primary memory is the internal memory of the computer.	Secondary memory is an external memory.

Ques.21) what is primary key?

Ans. The column or group of columns in the table which helps us to identify it specifically, each row of that table is called primary key. The functions keys F1 to F12 show.

For example, you have a customer table where each customer has a unique customer ID number. The customer ID field is the primary key of the customer table. When a primary key consists of more than one field, it is usually made up of pre-existing fields, which are taken together and provide a unique value.

ॐ।

Question ms word**Ques.1) what is word processing? Explain the features of word processing?**

Ans. word processing, we mean a process in which we can create a document with the help of computer software, save it for future use. The prepared document can be printed. Word processing is a software package that helps us to make a document easier than to create it by hand, make changes to it, print it and save it. Creating a document means typing from the keyboard, correcting spelling errors in the document, adding words or paragraphs, etc.

Features of word processing

- Changing case.
- Creating text documents.
- Editing and formatting the existing documents.
- Making a text document interactive with different features and tools.
- Graphical documents, comprising images.
- Used by Authors and Researchers.
- Detect grammatical errors in a text document.

Ques.2)what is word? Features of word?

Ans. **MS Word**, Whose full name is 'Microsoft Word' and it is also known as 'Word', is a word processor. Which works to open, create, edit, format, share and print the document etc. MS Word i.e. Microsoft word is software of Microsoft office package. It is also called 'Word'. It is used to do word processing or to create, edit, open, read, format, print and share documents.

Features of word

- Convert a List to a Table
- Convert a Bulleted List to SmartArt.
- Create a Custom Tab.
- Quick Selection Methods.
- Add Placeholder Text.
- Changing Case.
- Quick Parts.

Que 3) what is clipboard? Contents of clipboard?

Ans. we cut or copy any data in the computer, it is stored in the clipboard and as soon as we paste the cut or copied data, then that data is moved from the clipboard and on our given location. It gets pasted. Clipboard is a memory, in which when users cut and copy any text, image, graphics or any object, it is stored in this memory, and the user can paste the object stored in memory when needed.

Que4. Explain Format painter

Ans. If you want to enter the format of a selected data by copying it to more than one data, then instead of clicking once on the application with Format Painter, click twice. Will go Use of Format Painter in MS Word Use of Format Painter in Word First of all you will select the Text / Paragraph / Document whose formatting you want to copy. After that you will go to the Clipboard Group of the Home Tab. After that click on Format Painter

Que. 5) What is text alignment in ms- word? Name the different kinds of alignment in ms- word?

Ans: To understand the alignment in Microsoft office word easily, we have to know its real example. Whenever you are writing on a page in a copy, then you leave some empty space on the left or right side then start writing from a particular place. Even in Ms word, when you create a document, first its page is prepared, which can contain text, pictures, charts, etc. So where will the writing of text be started in it and on which side how much space will be left, it is decided by the setting of alignment.

Types of alignment in ms word

There are four types of alignment in Ms word.

left alignment in ms word

- The text of any page is in the start alignment from the left side when it is completely straight from the top to the bottom left side.
- If you want to follow the same process by shortcut key, then directly press Ctrl + L and your selected text will automatically follow left-alignment.

Right alignment in ms word

- Any paragraph or text is said to be in right alignment when it is in a straight line above the right side.
- If you want to get right alignment by shortcut, you can press Ctrl + R.

center alignment in ms word

- Any text or paragraph will be called in center alignment only when it is in the center from both the left and right sides.
- To complete this process by shortcut key, press Ctrl + E.

Justified alignment in ms word

- Any text or paragraph can be set in justified alignment when it is in a straight line from both sides.
- For this, click on Justify inside the home tab.
- To complete this process by shortcut key, press Ctrl + J.

Que. 6) What is line spacing?

Ans: Line spacing is the amount of vertical space between lines of text in a document. It is an important formatting feature in Microsoft Word that

improves the readability and appearance of documents. Different types of line spacing such as Single, 1.5, and Double spacing are used according to the document requirement. Proper line spacing makes assignments, reports, letters, and resumes look neat, organized, and professional. Users can easily adjust line spacing from the Home tab or Paragraph settings in MS Word.

Que.7) what are indents? Types of indent?

Ans. When you type some document in MS Word or any text editor or software, then through Indent Function you can select your document area that you have to type in your document page when you type area in document page. If you select Indent Function, Indent Function will put an area limit in the type area in your document page that you can type only in this area in which there is limit of Indent Function.

Left Line Indent	Indents all the lines of the paragraph at a certain distance from the left margin.
Right Line Indent	Indents all the lines of the paragraph at a certain distance from the right margin.

Que.8) What is Find and replace in ms word?

Ans. Find: The work of find option in ms word is when a particular word is searched in a large document, it will take a lot of time to find it, but with the help of find command, you can find any word very easily, so when Also if a word has to be found or searched, then the Find option is used.

Replace: The replace command is then used. When a word has to be changed in a document, then replace is used for that. For example, if you want to change any word or want to change it which is the same type of word, then you can easily change all the words by clicking on replace all with replace command.

Que9) Define cover page, blank page and page breaks.

Ans. **Cover page**: The first color page of any book or document on which the name of that book, summery related to the book, writer's name, company's name, , place and time etc. The given cover page is called.

Blank page: Open the document in word In most cases, blank pages are created due to some extra paragraph or page break in a word document.

Page breaks: A page break allows you to go to the next page before reaching the end of the page. If you are writing on the title page to be able to start a new page then you can use page break. In our example, our chart is the divide between two pages.

Ques10) what is table in ms word? Explain different types of table in ms word?

Ans. Table is used to arrange any data or information in different boxes. This is a group of rows and columns in which the category and the information inside it is written.

Insert table: Table is called that in which rows and columns are given. In Microsoft word, you can drive the table according to you, in which you can set how many rows and how many columns to keep or you can insert the table without dragging.

Draw table

Draw table can be used to draw a table on the document page. You can draw a table according to the need on the page of your choice using your mouse or track pad. Once you have created an external border for your table, you will need to draw horizontally to add columns or down the inside of the table to add a line

Quick Table

If you want to use Prebuilt Table Templates then you can click on Quick Table. For example, you can insert a quick table into a document to create a calendar, double table, matrix, etc.

Que.11) Define terms:

Pictures, clipart, smart art,

Pictures: Picture works to make a document attractive.

Inserting a picture in Microsoft Word is very easy. You can do this

work in just a few seconds. Apart from this, the inserted picture can also be formatted accordingly.

Clipart: Clip art is a collection of pictures or images that can be imported into a document or any other program. Images can be either vector graphics or raster graphics. Clip art galleries contain anywhere from a few images to hundreds of thousands of images.

Shapes: Microsoft Office gives its users certain shapes by default. Gives what we can draw in our document and do their formatting. The object is the pictures drawn by you by inserting such as - star, flowchart, circle, arrow etc.

Smart art : Smart Art can also be called Flow Chart. When we have to show our thought through image not by writing in text, then in that situation we can show our thought in Ms Word by using smart art given under Insert Menu. Through Smart Art, we can represent well in graphical form in comparison to text.

Que.12) what is chart in ms word? Name the different types of chart in ms word?

Ans. Complete information about Insert Chart Menu of Word. On inserting the chart, you also get an excel sheet, in which chart related data is inserted. In this, you can prepare the chart according to your need by setting the data according to your need.

Que.13) Types of chart in ms word

Ans. Different types of chart availed in ms word

1) **Column chart in Excel**

We can use column chart to compare two and more than two data. In this chart is shown as a data column. With the help of which it becomes easy to compare the data. Whose shortcut key can also be applied with the help of ALT + F1.

Line chart We should use line chart when the data is changing with time. Then it is used for graphical representation. The lines presenting the data chain in a line chart are horizontal lines. By looking at these lines, we can easily compare which data's value has increased or decreased when and by how much.

Pie chart :- Pie charts are applicable only where there is only one data set. Its shape is in the circle and in it all the values are shown in different colors. In this, the value of which is shown as much in the total value, it also comes in the list of important types of chart in excel in excel.

Area chart:- We can use the area chart where we have to show the changes in the data chain over time. This chart is almost the same as the line chart, the only difference is that the lower part of the line is filled with some color.

Que.14) Define terms :

A) Hyperlink: A hyperlink is a reference to a link or data that can be accessed by users by direct clicking. Hyperlink performs any functions related to a complete document or a document.

Hypertext is text with a hyperlink. The text to which it is linked is called hypertext.

b) **Bookmark:** A sign that should be put in a book so that whenever we want to reach that page in the book, we can easily reach it with the help of this sign, like - suppose you are reading a book and in the middle you have to If we have to leave it for some work, then we can use bookmark sign.

c) **Header :** The top parts of the page are called headers and are added to the top margin of the header page. In this page number, number of pages, date time, auto text etc. are added. From its toolbar, you can go from header to footer to footer to header. You can also use this task by scrolling.

d) **footer:** The footer is the line that is printed in the bottom margin of the page, in a document the name of the author, page number, reference, subtitle are used in the footer. Along with the text in the header and footer, graphics are also used.

Que.15) Explain WordArt.

Ans . Word art is such a tool inside Microsoft word by which decorating the word is made decorative word art has the same meaning to decorate the word with art word means word and art means art and when word If both art and art are joined together, then the format of an attractive word is prepared.

Que.16) Explain Drop Cap

Ans. Drop cap means that which is the letter of the beginning. Drop cap is used to make that letter bigger i.e. in capital. Which is the first letter of the paragraph. It will appear effective.

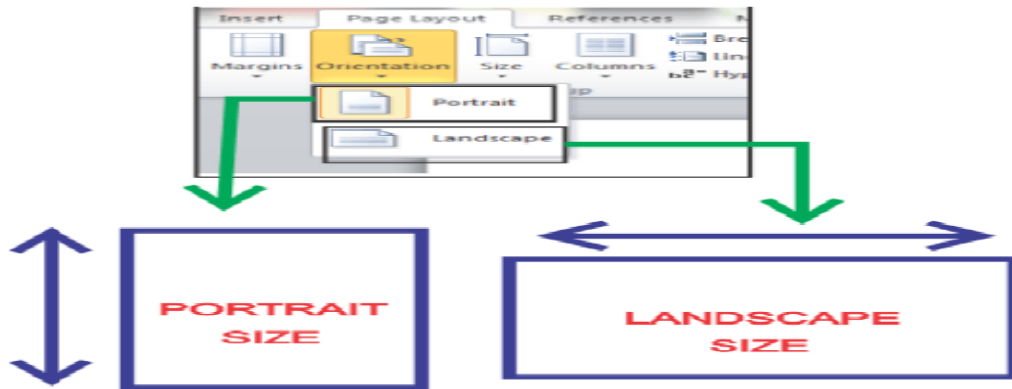

Que.17) What is page orientation ? Explain types of page orientation?

Ans Page orientation is called the direction in which a document is displayed or printed. The two basic types of page orientation are portrait (vertical) and landscape (horizontal). Most monitors have a landscape display, while most documents are printed in portrait mode.

Types of page orientation

Portrait:- Under ms word, when we have to type any document in a long page size, then we select Portrait inside the orientation function.

Landscape:- When we have to type any document in a wide page size inside ms word, then we select landscape inside the orientation function.

How to Change Page Orientation in MS Word

Step 1: First, open the file in Microsoft Word in which you want to change the page orientation.

Step 2: Click on the Layout (or Page Layout) tab from the menu bar.

Step 3: If you want to change the orientation of only one page, click on Breaks and then select Next Page under the Section Breaks option.

Step 4: Place the cursor on the page whose orientation you want to change.

Step 5: Click on the Orientation option and select Landscape.

Step 6: Now you will see that the selected page orientation has changed from Portrait to Landscape.

Ques.18) Define watermarks.

Ans. Watermark is shown in the background of our document page like a simple image. Watermark is used as a text or image in the background of the page. Watermark is used so that our page or document looks unique and which cannot be copied. Many companies use it to show their copyright, whenever you print a document containing a watermark, it appears in the background of the page.

Ques.19) what is footnote and endnote? Difference between footer and footnote?

Ans. Footnote is the note to be shown in the bottom part of the page, which is used to insert document related information in our document, with the help of this we can add all types of information related to our document.

Endnotes can be understood as notes found at the end of documents or parts of a book or books, which contain external information on the contents or sources of information and points to be used in the lesson. The endnotes are used mainly to show the authors and contents of the sources used in the lesson and are arranged in Roman counting in relation to the lessons used. They are shown by numbers or sometimes by signs such as *. These are found in books, reports, documents, paragraphs etc.

Difference between endnote and footnote:

Footnote	Endnote
----------	---------

footnotes appear at the bottom of the page,	Endnotes refer to a note written at the end of a book or a particular part of a book.
Shows in the last parts of the page	The last of the documents or books or lesson is shown.

Ques.20) difference between footer and footnote.

Ans.

Footer	Footnote
Footers are located in the margin area at the bottom of a page.	footnotes appear at the bottom of the page,
Footer content is shown at the last of every page	Shows in the last parts of the page

Ques.21) what Is mail merge? Write steps to create a mail merge?

Ans. Mail Merge in MS Word is that facility by using which you can send many or different letters, Invitation Card, Personal Letter, Office Letter etc. to many users in the shortest possible time, by mail merge, to multiple persons on the same document. Can be

prepared easily and timely to be sent. This saves the time taken in creating multiple documents. Each document is prepared with a personal name etc., which makes a good impression on the reader.

Mail Merge in MS Word

1. Mail merge is a tool which allows you to create form letters, mailing labels and envelopes by linking a main document to a data source. ...
- 2.1) Open Word and create a new blank document. ...
- 3.1) Click Letters for the document type. ...
4. Step 3 – Select Recipients.
5. Step 4 – Write Your Letter.
6. Step 5 – Preview Your Letters
7. Step 6 – add data insert merge field

Ques.22) what is macro? How can we record a macro in ms word?

Ans. A macro can also be a small program, or script, that automates common tasks. These scripts are often run within programs and are often created by the user in ms word, go to the Tool Menu and click on Macro, after which you will see the option of Record New Macro. With clicking this option, the process of recording a new macro starts.

In other words Macro is a type of recording tool which records the work done by us and runs them in the same process when run, so that the same task is completed in a very short time. It helps us to automate our repetitive tasks.

Steps to record a macro:

1. Open the workbook that contains the macro.
2. Press Alt + F8
3. Select the macro that you want to run, and then click Run. ...

4. To step through the macro line by line, click Step Into. ...
5. To execute the rest of the macro without stepping through it, click Run Sub/UserForm.

Ques.23) How you will set date and time for your computer?

Ans. 1) Go to control panel.

- 2) Click clock, language and region.
- 3) Set date and time option.or set as region and language.
- 4) Set date as small date (dd,mm,yy)
- 5) Set large date (ddd,mmm,yyy)
- 6) Than save date format.

Ques.24) what is the purpose of quick access toolbar?

Ans. The quick access toolbar is provided in various Microsoft text editor programs. Its main purpose is to include constantly useful commands and buttons in one place. Its main motive is to store frequently used commands and buttons at one place. Add Commands to the Quick Access Toolbar work differently than Tab. They have nothing to do with any tab. You can see it in MS Word, MS Excel, MS PowerPoint, WordPad and MS Paint of Microsoft Office except Notepad. Quick Access Toolbar can also be customized. You can add any command to the Quick Access Toolbar. This means that the command you want to use can be added to the Quick Access Toolbar. And the command which you do not want to use, you can also remove it from the toolbar.

Que.25 what is placeholder?

Ans. Placeholder is also called as dummy text or filler text. It is a character, word, or string of characters that temporarily holds the place to the final data. Example: In the below screenshot, Email or phone is a placeholder.

Basic question in ms excel

Ques. 1 what is spreadsheet?

Ans. Spreadsheet is a paper in reality in which Rows and Columns are made. In which data, numbers or texts can be written. For example, the balance sheet of a company is only a spreadsheet. In other words, electronic spreadsheet excel is similar to a paper spreadsheet which is shown on the screen of a computer monitor.

❖ Features of spreadsheet

- Rows and columns. Through a spreadsheet's grid system of rows and columns, all of your information is neatly organized in one easy-to-read space.
- Formulas and functions. ...
- Data filtering and visualization. ...
- Custom formatting. ...
- Accounting. ...
- Analytics. ...
- Presentations. ...
- Project management.

❖ Applications of spreadsheet

- Business Data Storage. A spreadsheet is an easy way to store all different kinds of data. ...
- Accounting and Calculation Uses. ...
- Budgeting and Spending Help. ...
- Assisting with Data Exports. ...
- Data Sifting and Cleanup. ...
- Generating Reports and Charts. ...
- Business Administrative Tasks.

Ques.2 what is worksheet?

Ans. Worksheet is mainly a collection of cells where we collect our data and also make changes in it. If you tell according to the position, then the left side of the row bar and the area below the column bar in Microsoft Excel is called worksheet.

Ques.3 what is workbook?

Ans. **Workbook** is similar to a file or a book that is organized in the form of rows and columns. A **workbook** contains one or more worksheets. It is easy to combine multiple worksheets in a workbook, where data is stored and managed. The number of worksheets in a workbook is not fixed; it depends on the system memory. A workbook is an Excel file.

Ques.4 Features of ms excel.

Ans. 1. Auto sum – The most used feature of MS Excel is AutoSum. Through this, you can calculate the value or numbers written in any cells (sum, average, max, min, count number etc.) and get the answer.

Sort and filter – In MS Excel, Sort and Filter are used to organize and display specific data easily. It helps to arrange information such as student details, employee details, customer details, and many more.

Paste special – The paste special feature is different from a standard paste option. Paste special gives you such a facility that you can choose what you want to paste in the cell.

Ques.5) Define rows, column and cells.

Ans. Row: In MS Excel, a row is a horizontal line of cells used to enter and organize data. Rows are identified by numbers such as 1, 2, 3, and so on.

Or in very simple language:

Row – In MS Excel, the horizontal line of cells is called a row. Data is entered in rows and columns.

Column: In Ms Excel, a column is a vertical line which we can refer to as A, B, C, D, As we know, a column is formed by the joining of one or more vertical lines.

Cells: Cell is called that which is present between Row and Column inside Excelsheet, we can say that only Row and Column constitute a cell. When users work in excel sheet, then data type / content type of this cell inside Excelsheet. Inside does any type of your content like - related to word or digit type etc.

Ques 6) define: cell reference, active cell.

Ans. Cell reference Whenever we use any formula or function in excel, then cell reference is required in that formula or function. Instead we use cell address and this cell address is the cell reference of that formula or function.

There are different types of cell references in MS Excel which are as follows.

Relative

1. Absolute

Relative Reference

By default, all cell references are relative references and when a copy is made in a cell, it changes depending on the relative position of the lines.

Absolute Reference

If you do not want to change the cell reference while filling the cell, then copying or filling the relative reference does not change the absolute reference and absolute reference can be used to position a row.

Active cells

An active cell means that the selected cell at that time is also on a spreadsheet. It can be identified by a bold (which is typically blue) outline and it is spread around that cell. Whenever you click on a specific cell of a Spreadsheet, it becomes an active cell. . Whereas once you select a cell, then you can add values or a function to that cell if you want. Automatic active cell is A1

Ques7) function of ms excel.

Ans. 1) **Sum** : The SUM function adds values. You can add individual values, cell references or ranges or a mix of all three. For example: =SUM(A2:A10) Adds the values in cells A2:10. =SUM(A2:A10, C2:C10) Adds the values in cells A2:10, as well as cells C2:C10

=sum(A2:A5)

2) **Average** : The formula to calculate the average of given numbers is equal to the sum of all the values divided by the total number of values

=average(A2:A5)

3) **Max.:** MAX will return the largest value in a given list of arguments. From a given set of numeric values, it will return the highest value.

=max(A2:A5)

- 4) **Min**: The Microsoft Excel MIN function returns the smallest value from the numbers provided.

=min (A2:A5)

- 5) **Product**: The PRODUCT function multiplies all the numbers given as arguments and returns the product. For example, if cells A1 and A2 contain numbers, you can use the formula **=PRODUCT (A1, A2)** to multiply those two numbers together.
- 6) **If**: IF function, one of the logical functions, to return one value if a condition is true and another value if it's false.
- 7) **Concatenate**: Use CONCATENATE, one of the text functions, to join two or more text strings into one string. Important: In Excel 2016, Excel Mobile, and Excel for the web, this function has been replaced with the CONCAT function.
- 8) **Left**: LEFT returns the first character or characters in a text string, based on the number of characters you specify. LEFTB returns the first character or characters in a text string, based on the number of bytes you specify.
- 9) **Right**: RIGHT returns the last character or characters in a text string, based on the number of characters you specify
- 10) **Dmax**: The DMAX Function[1] is categorized under Excel Database functions. The function helps find the maximum value for a specific field/column in a database for selected records based on user-specified criteria. DMAX will return a numerical value.

- 11) **Dmin:** The function helps find the minimum value for a specific field/column in a database for selected records based on user-specified criteria. DMIN will return a numerical value.
- 12) **Sumif:** the SUMIF function to sum the values in a range that meet criteria that you specify. For example, suppose that in a column that contains numbers, you want to sum only the values that are larger than 5. You can use the following formula:
=SUMIF(B2:B25,">5")
- 13) **Countif:** COUNTIF, one of the statistical functions, to count the number of cells that meet a criterion; for example, to count the number of times a particular city appears in a customer list.
- 14) **Count:** The COUNT function counts the number of cells that contain numbers, and counts numbers within the list of arguments. Use the COUNT function to get the number of entries in a number field that is in a range or array of numbers.

Ques.8) explain goal seek.

Ans. Goal Seek is such an inbuilt function of Excel that is capable of performing a calculation by repeatedly changing the value until the user gets the desired result.

Example:

In the table we have a list of some items, their Qty, Rate and = Qty * Rate = Total Amount and after extracting the total of all, the

result that we have come out is 173250 while our total target is given Rs 200000 lakh. went. Now we will know it with the help of Goal Seek option that how many rupees or quantity should be increased in the items so that we can achieve our target.

Ques.9) explain data validations.

Ans : Data validations is such an inbuilt tool of Excel, so that we can prevent the entries of invalid data in the worksheet, this will not allow invalid data to be entered in the Excel sheet and if we accidentally type any invalid data then it is our window screen. But an error message will appear that we have entered invalid data.

Advantages of data validations:

- If we use DATA VALIDATION inside MS EXCEL, then we are saved from the mistake of typing the data inside the excel sheet?
- If we use data validation in excel sheet then we do not need to check our excel sheet typed data again and again.
- Inside the excel sheet, we can use data validation in many formats like – number, word, date, time decimal etc.
- Putting data validation in excel sheet inside MS EXCEL is not a difficult task, you can easily use data validation inside excel sheet.
- If DATA VALIDATION takes place while typing in an excel sheet, then understand that you are far away from the mistake in the excel sheet.

Ques.10) what is auto sum and auto formatting?

Ans:**Auto sum:** The autosum function in excel automatically enters a formula for the sum of numbers in your worksheet and allows you to calculate the sum of the numbers without any formula.

Auto formatting: Auto Format is a very effective feature that automatically changes the appearance of the text automatically. This feature is called AutoFormat. For example, if a user types “1st”, then AutoFormat will convert it to “1ST”.

Ques.11) what pivot table? Steps to create a pivot table?

Ans . Pivot tables are effective tables, which allow users to prepare large amounts of data in small, tabular formats for easy reporting and analysis. It can sort, count and total data, and it is also available in many types of spreadsheet programs.

Steps :

- 1) Enter your data into a range of rows and columns.
- 2) Sort your data by a specific attribute.
- 3) Highlight your cells to create your pivot table.
- 4) Drag and drop a field into the "Row Labels" area.
- 5) Drag and drop a field into the "Values" area.

Ques.12) what is conditional formatting?

Ans.Conditional Formatting in Excel is used to change the formatting of cells in a range based on your condition. This condition can be a rule based on number value or any text. By changing the formatting of cells, cells can be highlighted for analysis of any data.

Ques. 13) what do you means by filter? Explain types of filter?

Ans. Filter is a criteria or condition. On the basis of which the records in the data base file are searched. or is input. In this, the condition is prepared based on the data type of the field. There is a feature in micro softexcel to do these things - filter command. The filter follows the caritera you've given and shows the same result as a small table containing only the information you're looking for.

Types of filter

- Simple Filter
- Advanced Filter in Ms Excel

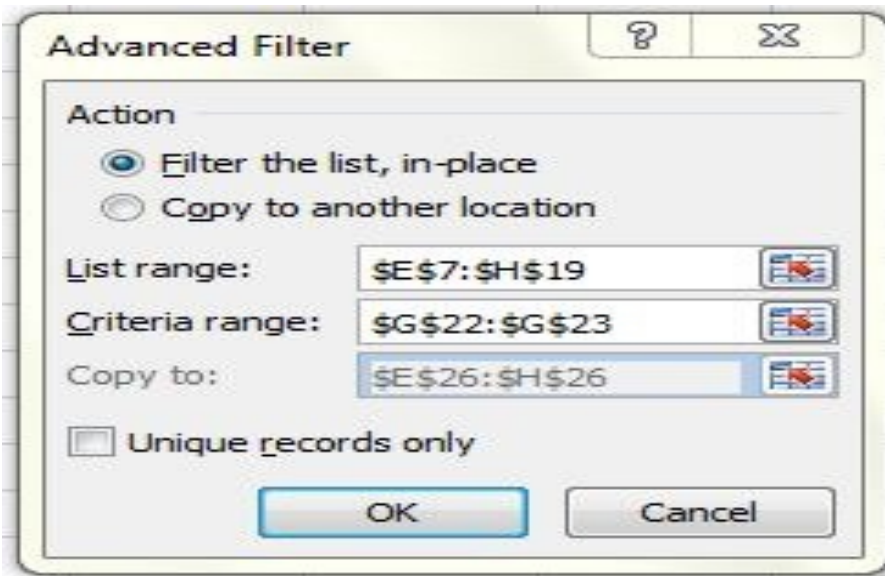

Simple Filter –

- Simple Filter option will be available to us in home tab and data tab, through this filter we can easily filter.
- First of all select your database.
- Now go to home tab or data tab and select Filter option.
- After selecting the Filter option, a down arrow symbol will appear in each column, you can filter your data through this down arrow.

Advance filter

This is also an advance means of filtering. Know by name like Advance Filter

In this we can filter the data by applying some condition. In advance filter we can filter the database with different types of condition. so let's see

Ques.14) what is save and workspace?

Ans. Save Work Space Function As the name suggests, this option is related to Save, while working in Excel, many times we open more than one workbook and we want that whenever we can save these files / books again. If we open then open again in the same way as we are closing, then for this we can use Save Workspace Function given under View Menu in Ms Excel.

Ques. 15) what is freeze pane?

Ans. There is an option of freeze panes inside Excel, which if used, can be easily seen above the heading and if the heading is given in the column, if it is also fixed, then that too data scroll. It will be visible while doing so that it will be very easy to update the data to see and understand. There is an option of freeze panes inside Excel, which if used, can be easily seen which is the heading of the top and if the heading is given in the columns also if it is

fixed then that too data scroll. It will be visible while doing so, so that it will be easy to update the data to see and understand.

Ques.16) what Is Sorting function?

Ans. The meaning of sorting is similar to searching, like how many things we search in our daily life, such as sometimes on Google or sometimes in Books and sometimes in Contact List, we keep searching phone number and many more. If you want to sort in the increasing order of the Sorting Database, then click on any one field of that column. Now in the standard toolbar, click on the Sort Ascending button, on which Z is printed below A. You will see that your database is sorted in ascending order.

Ques.17) what is range in ms excel? How do you select a range?

Ans. A cell or a group of more than one cell is called a cell range. Suppose your data is in 10 cells and you have to do any operation on it, then you work directly on a range so that all the cells do not have to be named separately. As soon as you give the cell range, Excel understands which cells are being talked about.

How do you select a range

Cell range is called that which is present between Row and Column inside Excelsheet, we can say that the cell is formed by the combination of Row and Column. When users work in an excel

sheet, then the data type / content type inside Excel sheet is the same cell. Does any type of your content like - related to word or digit type etc.

Ques.18) what is Auto fill and Auto complete?

Ans. **Auto fill:-** Auto fill is a function in some computer programs, which automatically fills the area of a web form. The Auto fill option found in the web browser allows you to fill the fill information usually in the web form. This information can be your full name, your email or post address or your credit card information as well as your email and password.

Auto complete: Autocomplete, also known as autosuggest or search suggest, is a feature that provides forecasting as you type in a text box. It can be used for other objects, but it is usually associated with search engines.

.

Ques.19) what is drop down list?

Ans. An effective way is to give the option to select a drop down list from a pre-defined list. It can be used for users to fill the form, or while creating an interactive spreadsheet dashboard. Drop down lists are quite common on websites/apps and are very easy for the users.

Question Ms PowerPoint

Ques.1) what is ms powerpoint?

Ans. The full form of MS PowerPoint is Microsoft PowerPoint which we also know as Powerpoint. This is a very powerful

presentation making program that works to prepare our data, text, audio in the form of slides and create, edit, format, share and present it.

Ques.2) How could add header and footer in PowerPoint?

Ans. In PowerPoint Slide, it is shown in the Top Side of Header slides and in Bottom Side of Footer slides. In Header and Footer, we can insert Title or Heading Date, Slide Number) or Information. Open Powerpoint presentation in whose slides we want to insert header and footer. Click on the Insert Tab located on the Ribbon. All the commands related to the Insert tab will be shown on the screen.

Text Group will appear on the left side of the Insert tab. Here we will get Header and Footer command. On clicking on this command, the Header and Footer dialog box will be shown on the screen.

|

Ques.3) How to apply animation effect over different object in ppt?

Ans. First of all you have to select the object you want to animate, then select one of the animations from the “Animations tab” and modify the animations setting as per your choice. Slides transitions are handled the same way from the "Transitions tab".

Animations can be used to make a Powerpoint presentation a little special. You can animate both text or objects on a page as well as create transitions between pages. Powerpoint also supports adding an animate image or video to a slide through the "Insert tab".

Ques.4) what do you means by custom animations in PowerPoint?

Ans. **Custom Animation:** –

Custom animations are a type of process under which it is mainly used for designing, drawing, layout making and photographics. The main thing is to do the preparation of animations. After which you can integrate into many types of multimedia or any game product. When we want that in all the slides created by us, only some special slides should be shown in the presentations, then we call this type of presentations as custom animations.

Ques.5) what is ppt? What are its uses?

Ans. The full name of PPT is Powerpoint Presentation, it is an important part of a software Microsoft. This file can be created to explain any object, subject with the help of text, image, shape etc. This is a program with the help of which you can prepare a dynamic or powerfull orattractive presentation. Powerpoint Presentation is developed by Microsoft. It works to prepare our text, audio in the form of slides and create, edit, format, share and present it.

Uses of Power Point Presentation

- Animations. ...
- Text and Image Emphasis. ...
- Follow the Bouncing Ball. ...
- Narrate over Slides. ...
- Use PowerPoint as a Blank Template for Building Video Content. ...
- Embed a YouTube Video in your PowerPoint Presentation. ...

Ques.6) write the steps to insert slides in ppt?

Ans.a) In the slide thumbnail pane on the left side, click the slide that you want your new slide to follow.

b) On the Home tab, click New Slide.

c) In the New Slide dialog box, select the layout that you want for your new slide. Learn more about slide layouts.

d) Select Add Slide.

Ques.7) explain advantages of ppt?

Ans. **Quick and easy**: the basic features are easy to master and can make you appear to be organized, even if you are not.

- **Simple bullet points**: it can reduce complicated messages to simple bullet points. Bullet points are a good basis for a presentation and remind the speaker of main points and the organization of the message.
- **Easy to create a colorful, attractive design**: using the standard templates and themes, you can create something visually appealing, even if you do not have much knowledge of basic graphic design principles.
- **Easy to modify**: when compared to other visual aids such as charts, posters, or objects, it is easy to modify.
- **Easily re-order presentation**: with a simple drag and drop or using key strokes, you can move slides to re-order the presentation.

Ques.8) Explain disadvantages of ppt?

Ans. **Design power pointless**: gives the illusion of content and coherence, when in fact there is really not much substance or connection between the different points on the slides.

PowerPoint excess: some speakers create presentations so they have slides to present rather than outlining, organizing, and focusing on the message.

- **Replaces planning and preparation:** PowerPoint is a convenient prop for poor speakers, as it can reduce complicated messages to simple bullet points and elevates style over substance.
- **Oversimplification of topic:** the linear nature of PowerPoint forces the presenter to reduce complex subjects to a set of bullet items that are too weak to support decision-making or show the complexity of an issue.

Ques.9) what is slide sorter view and slide show view?

Ans. **Slide Sorter View:-** In this view, you can see all the slides of the presentation together in a small form, in which all the text and graphics are also shown. In slide sorter view you can place slides in any order you want.

Slide show view:- The slide show view in PowerPoint is used to display a presentation on or from your computer. This is the best method to view or preview your presentation, through slide show, your presentation can be shown more effectively.

Ques.10) How to insert movies and sounds in power point?

Ans. **1)** First open the PowerPoint presentation

- 1) Click on the Insert tab.
- 2) In the Media section on the Insert tab, click on the Audio icon. ,
- 3) Select the Audio on My PC option.
- 4) Select audio according to your need.

Que.1) what is internet?

Ans. Internet is information technology. Thousands and millions of computers are connected to each other in this network. Usually the computer is connected to the internet through a telephone line. Internet is used to get any type of information. You can use the internet for online study. Apart from this, you can also use the internet to create your documents or mail the documents.

Que.2) what is network?

Ans. Computer or other digital content and the process that connects them is called computer network. These computers can exchange electronic information among themselves, the main object of networking is the same, connecting devices and sharing information among them. Simply put, "connection of two or more computers in a computer is called a network".

Computers share data and information with each other through the network.

- A network can be made both wire and wireless.
- The network has such a high capacity to connect computers that devices can be connected from one corner to every corner of the world.

Que.3) explain types of network?

Ans. Main three types of network

Local area network)

- The full name of LAN is local area network. A LAN is a network used to connect computers or devices in a small area to each other. Such as - in office, school, college etc. You get to see such networks in schools, colleges, offices etc. It is very cheap to create

LAN in comparison to other networks. A hub, switch, network adapter, router, and Ethernet cable are used to connect computers in a LAN.

MAN (Metropolitan Area Network) : The full name of MAN is Metropolitan Area Network. The area of MAN is larger than LAN but smaller than WAN. MAN network is similar to LAN but area of MAN is larger. Covers the distance. It is less expensive than LAN.

WAN (Wide Area Network) : The full name of WAN is wide area network. WAN is the network that connects every computer and device in the world. We also call it international network. Because this network is for state to state and country to country connectivity.

Que.3) explain advantages or disadvantages of internet?

Ans. **Advantages**

- Central Storage of Data – ...
- Anyone can connect to a computer network – ...
- Faster Problem-solving – ...
- Reliability – ...
- It is highly flexible – ...
- Security through Authorization – ...
- It boosts storage capacity –

Disadvantages

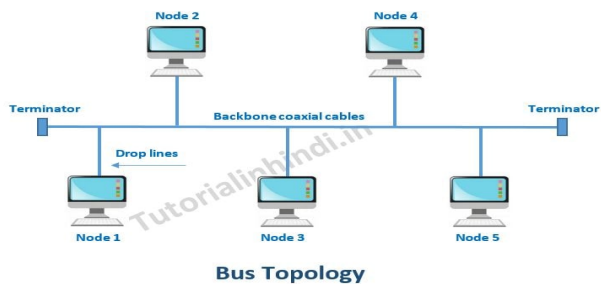

- It lacks independence. ...
- It poses security difficulties. ...
- It lacks robustness. ...
- It allows for more presence of computer viruses and malware. ...
- Its light policing usage promotes negative acts. ...
- It requires an expensive set-up.

Que.4) what is network topology?

Ans. The way computers are connected to each other is called network topology. The method of connecting computers or data flow in them is called topology. The topology shows the structure of the network. The network topology shows the layout of a network.

Que.5) explain types of network topology ?

Ans. Bus topology – In bus topology, backbone cables are used to connect all computers and network devices. There is a special device at the start and end point of the cable called terminator, which controls the signals. In this, coaxial cable is used as backbone cable. It uses half-duplex and board cast technology to send data. It is also called linear topology,

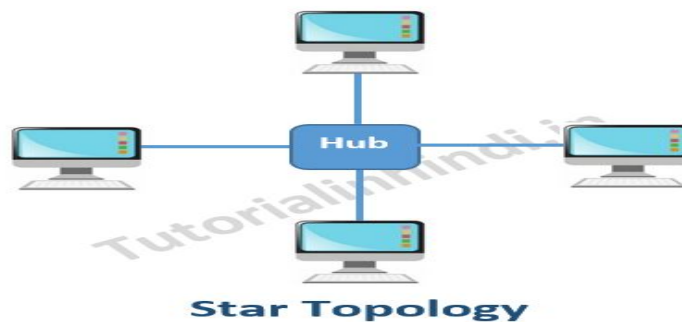

Ring topology –

In Ring topology, all the computers are connected to each other, and the first computer is connected to the last computer. Thus this ring shape is formed. That's why it is called ring topology. In this,

each computer has two neighboring computers. In ring topology, if any data wants to be sent from the first computer to the last computer, then that data has to pass through all the computers in between. Therefore repeaters are used in it to prevent data loss

Star Topology:- In star topology, all the computers are connected to the hub with the help of cable. Which is a type of central node? In this, all the computers are connected to a central node.

Mesh topology –

Mesh topology is a type of point to point connection. In this, all the nodes or devices are connected to each other with the help of a network channel.

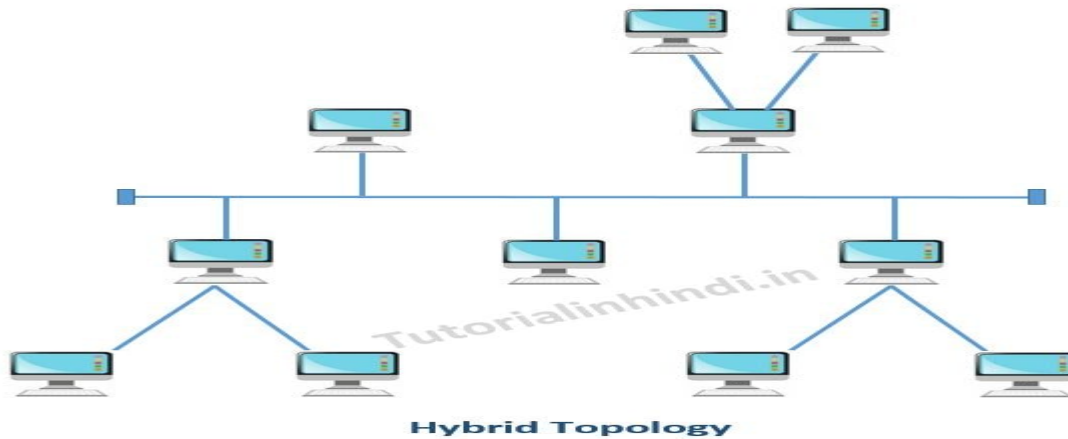

Tree topology –

In tree topology, nodes are connected in a hierarchical way. In this, all the nodes are connected to a top node which is called root node. This topology contains details of star and bus topology.

Hybrid topology : It consists of a mixture of two different types of topology. As there is star and mesh topology at one place, then hybrid topology is formed by adding those two types of topology.

Que.6) what is network devices?

Ans. Network devices or Internet devices are hardware devices by which two or more computers are connected to form a hardware devices network, so that those computers can communicate with each other, and by connecting data and resources. can. The devices used to connect any two devices (computer, mobile or other electronics devices) are network devices.

Que.7) What is Router?

Router is such a network device, which is used to transfer the data picket in the network. Data is sent between networks in the form of packets. Router works on the third layer of the OSI network model. When data is sent from one device to another device in the network, it is first converted into a data packet and reaches the router, then using Routing Protocol and Routing Table, the data is sent to the nearest router to the destination computer. , and then that router transmits the data to the destination computer.

Que.8) what is E-mail?

Ans. Electronic-mail and it is a method of sending internet based message, with the help of which we can send our message to thousands of millions of people at once. Sends our message very fast, due to which it happens to him.

Email was invented in the year 1971 by Raymond Samuel Tomlinson, a resident of America. He was a computer programmer. Internet was started in India for the first time on 15th August 1995. And with internet, e-mail started in India.

Que9) what is the use of E-Mail?

Ans. 1) Through this you can send message from people of any country of the world.

2) You can send message to thousands and millions of people at a time.

3) Through this you can share documents with people.

4) Through this, a virtual meeting can also be held by doing video-conferencing.

5) In this you also get the facility of Calendar, through which you can also set a reminder for all the important work ahead of you.

6) In this you also get the facility of automatic reply, through which whenever you receive an email, its reply goes automatically.

Que.10) how can be send and received E-Mail?

Ans. **Sending an Email:**

1) Login to your E-mail: ...

2) Click on Compose: ...

3) Enter Email ID: ...

4) Click on Send: After writing the message or after attaching a file or photo, if you want to send it to the email, then you will see the option of Send below the message, click on it, your message will be sent.

Receive an email

- Click on Check mail or Click on Inbox.
- Then to open that mail, click on its subject which is hyperlink, when you click on the subject of the mail, then your message opens.
- Click on the standard toolbar back button to go to the mail box, you can click the next or previous button according to the need to read another mail.

Que.11) Difference between Gmail and Email?

Ans.

Parameter	Email	Gmail
Definition	Email is a technique used for exchanging digital data over a network of communication like the Internet..	Google developed the Gmail platform. It is an Email client that allows its users to receive and send Emails.
Full-Form	Email is an abbreviation for Electronic Mail .	Gmail is an abbreviation for Google Mail .
Security	As compared to Gmail, Email is very less secure.	Gmail is more secure when compared to Email because it provides spam filtering, virus protection,

		and more.
Advertisements	The Email has no advertisements involved with it.	Gmail is involved with advertisements..
Scheduling	No scheduling option is available in the Email.	Gmail lets its users schedule their Emails for any specified time.
Email Syncing	The Email includes a regular sync time of every four hours every single day.	Gmail provides support for a maximum sync time of every hour every day.
